

STRAMAT Repair Mortar UF 7 kg without fillers

Item number:
OKA-116.7016.002

Weight:
7 kg

Created on 01.01.2024

Description

STRAMAT repair mortar is a durable, abrasion-resistant and weatherproof coating to smoothly adjust obstacles such as manhole covers, landings, etc. to the existing substrate. Road manholes and smaller potholes can be filled with our repair mortar.

The pure resin material to mix yourself with dry sand!

The ideal material to wedge protruding manholes / manhole covers winter-proof. It fulfills the same function also with projecting metal parts with expansion joints in the area of the bridge transitions.

The material can be stretched to zero. However, it is also elastic enough to accommodate minor movements. This prevents spalling, as is the case with other materials.
