

Pressure roller device

Item number:

KOE-RTC300

Created on 20.04.2024

Description

The RTC 300 pressure roller device is indispensable for the professional laying of road marking films. The RTC 300 is a film pressure unit equipped with three flexible pressure rollers and is designed for mechanical film laying. It can be attached to almost all tractors. (Attachment machine optional!)

The RTC 300 - Pressure roller contact - is deliberately designed as a user-friendly device. It generates a high contact pressure of over 100 kg, which ensures optimum adhesion of the film adhesive to the road surface.

The pressure roller contact device is suitable for all common road marking films.

Important product data:

- Model: RTC 300
- Total weight: 145 kg
- Number of weight plates: 2 pieces
- Number of rollers: 3
