

# Marking button / marking nail DPT3 B/B - white/white

Item number:

DOB-DPT3 B/B

Created on 24.03.2026

## Description

DPT3 marking button / marking nail  
white base body with white/white reflectors

- The DPT3 marking button is used for horizontal road marking
- It guarantees better visibility of road edges, especially at night and in the rain
- It is glued to the road surface with a bitumen or polyurethane adhesive
- The product is made of plastic, which is produced with high mechanical strength
- The retroreflector is designed for maximum functionality and durability. They consist of two separate parts, which has the advantage that damage to one side does not affect the function of the other
- The construction of the product reduces the abrasion of the reflectors
- The light reflectance is up to 450 mCd/Lux at an observation angle of 0.2 degrees and a measurement geometry of +/- 5 degrees. This enables the highest class of light reflection for such products
- The strongly roughened underside of the marking button guarantees maximum adhesive force
- The ergonomic shape with the notch for the fingers allows the marker knobs to be installed quickly and easily on the road
- Classes R3 and R1
- The product complies with the harmonized PN-EN 1463 standard.

# Description

## Areas of application:

- For demarcated lane strips - for horizontal road marking.
- For busy country roads and highways
- For permanent and temporary markings (temporary roadworks markings)
- For visual guidance and additional information for road users

## Dimensions and material
